Section 1 : Final SRS version

1. Purpose

- A city includes more than one district and every district has a few labor supervisors.
- The reason of a labor manager is to supervise the work of each laborer that works below him.
- There are two types of wages Depending on the form of works, wages may be weekly salary or an hourly salary.
- The hourly salary relies upon the entire range of hours spent in a day with the aid of using unique labor, whilst there may be no such limit for a weekly salary as labor could be paid on a weekly basis.
- We want to hold a file of all of the works achieved with the aid of using labor on a every day each and every district wise foundation to shop and distribute Wages.
- Main purpose is to simplify this LabourList and wages management to maintain daily wages, labor and supervisor details. From daily anonymous attendance to regular labor attendance. Inspect the safety and standards to work on the field for workers to avoid unwanted damages. Supervisor can Track work orders for various sites and the various locations at a single view.

2. Intended Audience and Reading Suggestions

- The Supervisor of the district can access the database for monitoring the progress of the works and can modify weekly or hourly wages of all labor.
- The head of the supervisor can modify supervisor salary.
- If a labor want to get high salary then labor can request to supervisor.
- The Supervisor can keep track of the requirements of precautionary things for particular work, working status of the activity and revenue generated from particular activity.
- Labor can see their wages, their working day etc.
- Labor can apply for leave and s/he will not get wages for that day.
- Supervisor also apply for leave.
- In case of accident / threat, man count & individual details can be traced and actions can be taken towards them.

- An adult worker shall work over 9 hours per day or 48 hours per week and overtime shall be double the regular wages. A female worker can work from 6 am to 7 pm.
- Equal compensation for equal work must be paid regardless of gender.
- The living wage is higher than the minimum wage and is designed so that a full-time worker should be able to support themselves and a small family at that wage.
- Recording of wage and labor-related data (registration of personnel information, holiday and sick leave balances).

Minimum Wages:

- Min wage needs to be paid at least the national/local/industrial minimum wage as per the law
- Min wage are reviewed and revised annually
- Min wage should be paid only for basic working hours

Payment of Wages:

- Wages need to be paid on time as per legal law
- No under-payment of basic wages, bonuses/benefits and overtime
- Social security payments need to be paid to concerned authorities on time as per law
- Workers have direct access to their wages
- Workers have a bank account where they receive their wage (preferably)
- Worker know how their wages are calculated
- Workers know how to read the pay slip
- Pay slip is provided in local language
- Pay slip includes all relevant wage information (holidays, days and hours of work, all components of wage, deductions, rest days, incentives or bonuses)
- Deduction should be legal/ compliance with legal law
- Any deduction, other than legal, should be done with consent of worker
- Wages should not be withheld

Payment of Working Hours:

- Workers are provided one day off in seven days
- Workers are provided breaks during working periods
- Facility has a formal request or approval process for urgent

Recruitment

- No child labour

- No forced labour
- Induction training for workers and supervisor

3. Product Scope

- It can create opportunities for unemployed labour.
- It can keep all records of wages which paid to labor and also keep record of all labor by different labor work.
- It enables paperless record keeping & calculations avoiding human errors, labor id, license no, expiry document with alert notifications, complete shift, overtime, comp-off management as per configurable company business rules.
- It contains information about right number of people, right kind of people at the right place, right time, doing the right things for which they are suited for the achievement of goals of the organization.

4. Description

The system contains the following tables:

- 1. Regions**
- 2. Company_deatils**
- 3. Labors**
- 4. Work_history**
- 5. Department**
- 6. Locations**
- 7. Leave**
- 8. Wages**
- 9. Supervisor**
- 10. Manager**
- 11. Owner**

The user can get the following information about the project from the given system:

- **Regions:** region_id, region_name
→ In this table region_id is primary key

This shows the basic details about the region of the company.

- **Company_details:** company_id,company_type,street_add,highest_no_worker,region_id

→ In this table company_id is primary key.

Here all the labors and supervisors can view the company details if they want to work in a particular company.

- **Labors:** labor_id,first_name,last_name,gender,phone_no,dept_id,company_id,supervisor_id,age,wage,hire_date,region_id,address,labor_type

→ In this table labor_id is primary key; dept_id and company_id are foreign keys.

Here all labors and supervisors of the company/factory can view basic details/information about labor.

- **Work_history:** labor_id,start_date,end_date,dept_id,company_id

→ In this table labor_id is primary key; company_id and dept_id are foreign keys.

Company/factory can view the work history of all labors like start date and end date.

- **Department:** dept_id,name,wages_range,company_id

→ In this table dept_id is primary key and company_id is foreign key.

Here supervisor or owner can modify the wages range according to requests of wages by labors.

- **Locations:** street_add,pin_code,city,state,country,region_id

→ in this table pin_code is primary key and region_id is foreign key

Here labors can select and view their work locations.

- **Leave:** leave_id,labor_id,date,reason

→ in this table leave_id is primary key and labor_id is foreign key

Here labors can apply or request for leave due to any emergency or illness only.

- **Wages:**wages_id,labor_id,dept_id,payment_id,date,receipt,total_amount,wages_type
 - in this table wages_id is primary key and labor_id is foreign key

Here supervisors can see wages details of their labors which have already been paid and Labors can view receipt of their wages.
- **supervisor:**supervisor_id,f_name,l_name,gender,phone_no,dept_id,company_id,salary,hire_date,region_id,manager_id,address
 - in this table supervisor_id is primary key; dept_id and company_id are foreign keys.

Here all supervisors of the company/factory can view basic details/information about labor.
- **Manager:**manager_id,f_name,l_name,gender,phone_no,dept_id,company_id,salary,hire_date,region_id,address
 - in this table manager_id is primary key; dept_id and company_id are foreign keys.

Here all Manager of the company/factory can view basic details/information about labor and supervisor.
- **Owner:**owner_id,f_name,l_name,gender,phone_no,company_id,address
 - in this table owner_id is primary key; company_id is foreign keys.

Owner of the company/factory can view basic details/information about manager, labor and supervisor.

Refrence:

<https://hmgroup.com/wp-content/uploads/2020/10/Wage-Management-System-Guideline.pdf>

<https://www.sedex.com/wp-content/uploads/2020/05/Sedex-1.1-Labour-Management-Control-EN.pdf>

2. Document the Requirements Collection/ Fact Finding Phase

ii. Background Reading/s

1. Description of each reading and references:

- Database System Concepts(Seventh edition), by Abraham Silberschatz, Henry F. Korth, S. Sudarshan
- From this book, we understood the DBMS concepts like E-R Model, Database designing etc.
- <https://www.sedex.com/wp-content/uploads/2020/05/Sedex-1.1-Labour-Management-Control-EN.pdf>

2. List the combined Requirements gathered from Background Reading:

- A Database management system is required to maintain and update all the information about labors, wages and the company details.
- All the basic facilities that are expected to be available like keeping a record of labors and their contact details, etc.
- Company owner and the Supervisor will be assigned different roles that will ensure the security of labors.
- Labors will be assigned different types of view permissions to show details about their wages, wages type and company details in which they are working

(iii) Interview

Interview Plan

System : LaborList and Wages

Project Reference :

<https://hmgroup.com/wp-content/uploads/2020/10/Wage-Management-System-Guideline.pdf>

Interviewee : Mit Sharma(Role Play)

Designation : Supervisor at cement factory

Interviewer:

1)Chintan Kanpariya

Designation : Business Development Executive

2)Smit Bhavsar

Designation : Developer

Date: 28/9/2022 **Time :** 14:30

Duration : 45 minutes Place: Google Meet

Purpose of Interview :

Preliminary meeting to identify problems and requirements regarding safety of the Labors.

Agenda :

- Introduction and current status
- Initial ideas and follow-up action regarding the laborlist and wages management at the company.
- Need of labor according to their gender.
- About the needs and complaints of the labors and how you handle those issues.

Documents to be brought to the Interview:

- Any documents relating to the current activities and current needs of the labors.
- List of Precautionary things required for each working activities.

Interview Summary:

System : LaborList and Wages

Project Reference :

<https://hmgroup.com/wp-content/uploads/2020/10/Wage-Management-System-Guideline.pdf>

Interviewee : Mit Sharma(Role Play)

Designation : Supervisor at cement factory

Interviewer:

1)Chintan Kanpариya

Designation : Business Development Executive

2)Smit Bhavsar

Designation : Developer

Date: 26/09/2022 **Time:** 3:25

Duration: 45 minutes **Place:** Google Meet

Purpose of Interview:

Preliminary meeting to identify problems and requirements regarding working activities of labors and their wages.

Results of the Interview:

- Regular feedback from supervisor about labors and their works will be taken and improvements will be done to the working activities accordingly.
- For the security of labors, the machines for work will be checked from time to time.
- Women have different needs to men that should be considered when developing processes around labour management – for example women may be more likely to experience harassment or discrimination at work due because of their gender.
- Strict rules will be implemented so that labors will not be allowed to do some working activities that are not suitable for their age.
- Training and communication should consider language needs of migrant workers – if migrant workers are not fluent in your workplace language, they will need health and safety instructions translated and explained to them in their own language, in order to be safe.

Interview Plan

System: LaborList and Wages

Project Reference:

<https://hmgroup.com/wp-content/uploads/2020/10/Wage-Management-System-Guideline.pdf>

Interviewee:

1)Ved Patel(Role Play)

Designation: Labor at Turner Construction

Interviewer:

1)Chintan kanpариा

Designation : Business Development Executive

2)Smit Bhavsar

Designation : Developer

Date: 28/09/2022 **Time:** 5:00

Duration: 45 minutes **Place:** Google Meet

Purpose of Interview:

- The overall opinion of the working activities of labor and their wages.

Agenda:

- Introduction and current status
- Current labor working activities and wages are satisfactory or not for labors.
- Working Activities of labors or wages that are dissatisfactory or need improvement.
- work that were more suitable to labors.

Interview Summary:

System: LaborList and Wages

Interviewee:

1)Ved Patel(Role Play)

Designation: Labor at Turner Construction

Interviewer:

1)Chintan Kanpариा

Designation: Business Development Executive

2)Smit Bhavsar

Designation: Developer

Date: 26/09/2022 **Time:** 5:45

Duration: 45 minutes **Place:** Google Meet

Purpose of Interview:

- The overall opinion of the labors, their working activities and wages.

Results of the Interview:

- Employment should be freely chosen.
- No discrimination should be practised.
- The ability of labors to do the work.
- Working conditions should be safe and hygienic.
- Working hours should not excessive.
- Living wages should be paid.
- Life insurance should be provided.
- No harsh or inhumane treatment should be allowed.

Combined Requirements gathered from the Interviews:

- Feedback should be received from the labors groups about different aspects of the working activities and suggestions.
- For the safety of labors, the machines for work will be checked from time to time.
- Company/factory should provide living rent and life insurance to their labors.

iv. Questionnaires

Google form link: <https://forms.gle/x2hfkhxXw7AMDU7dA>

LaborList & Wages

This survey will help us to build database of LaborList and their Wages and also it will be helpful for improvements in our database design.

 202001463@daiict.ac.in (not shared) [Switch account](#) 

* Required

According to you, How important is to create this software ? *

1 2 3 4 5

Not important Extremely important

Which functionalities you would prefer to have in this software ? *

- Basic Information of company/factory
- amount of wages to be given to labors by company/factory
- labor request to work in company/factory and allocation of work which suited for labor
- Requests for improve wages by labors
- Request for leaves by supervisors or labors
- Any deduction in wages against indisciplinary action by labors
- working status of the activity and revenue generated from particular activity
- Other: _____

According to you, How frequently would company/factory use this software ? *

1 2 3 4 5

Hardly Sometimes Very often

What do you think that Which company/factory information would labor require most often? *

- Private
- Government

What do you think that which type of wage would be preferred by labor? *

- Hourly Wage
- Weekly Wage

What do you think that Which type of payment method would be preferred by labor? *

- Online Payment
- Cash

According to you , should company/factory provide life insurance to labor? *

- Yes
- No

According to you , should company/factory give work below 18 age person? *

- Yes
- No

Any other Suggestions for the software ?

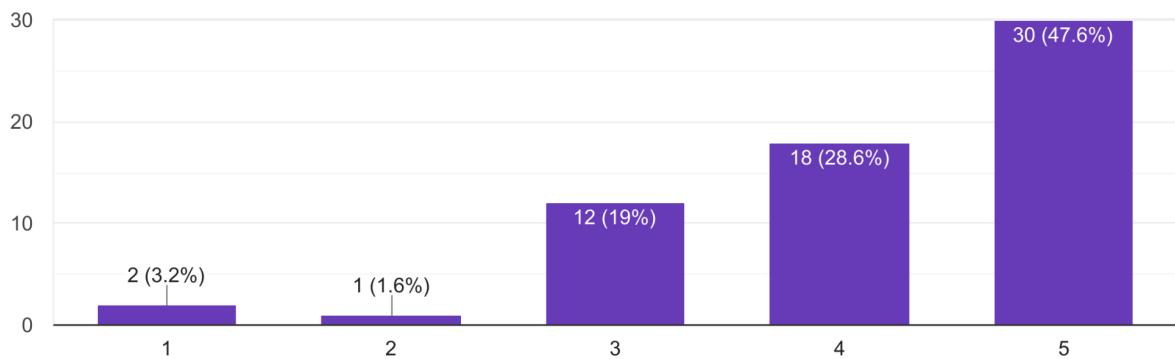

Your answer

Responses we got from the above questionnaire:

v. Observations

- According to the people this laborlist and wages software is very important to create.
- According to the people labors want to know **Basic Information of company/factory, amount of wages to be given to labors by company/factory, labor request to work in company/factory and allocation of work which suited for labor, Requests for improve wages by labors, Request for leaves by supervisors or labors, Any deduction in wages against indisciplinary action by labors, working status of the activity and revenue generated from particular activity**
- According to people company/factory will be interested to use this software to store laborslist and their wages.
- Labors will be more interested to know the details about private companies/factories rather than the government.
- Most labors would prefer hourly wages rather than weekly wages.
- According to people, laborers would like both payment methods (cash/online) equally.
- Company/factory should provide life insurance to labors.
- Comapny/factory should not give work to below 18 age person.

Combined requirements:

- company/factory Keep record of wages according to the department.
- Below 18 shouldn't be allowed to work in factory.
- Company/factory should take care about the security of labors at working place.
- Company/factory should consider the request of labors to improve their wages if relatable.

3. Fact Finding Chart :

Objective	Technique	subject(s)	Time
To get idea about the software of labor management	Background Reading	Company Requirements and Reports	0.5 day
To identify problems regarding working activities of labors	Interview	Supervisor at cement factory	45 min
To find Requirements regarding working activities of labors	interview	Supervisor at cement factory	45 min
to identify problems wages of labor	interview	Supervisor	45 min
to identify problems and requirements regarding safety of the Labors	interview	Manager	45 min
To find out the overall opinion of the working activities of labor and their wages.	interview	Labor at Turner Construction	45 min
To find out need of labor during working activities	interview	Labor at Turner Construction	45 min
To get idea of additional functionality of software	Questionnaire	People	1 day

4. Requirements

- Software should contain
 - Basic Information of company/factory,
 - amount of wages to be given to labors by company/factory
 - labor request to work in company/factory and allocation of work which suited for labor, Requests for improve wages by labors
 - Request for leaves by supervisors or labors
 - Any deduction in wages against bad disciplinary actions by labors
 - working status of the activity and revenue generated from particular activity
- company/factory will be interested to use this software to store laborslist and their wages.
- Labors will be more interested to know the details about private companies/factories rather than the government.
- Most labors would prefer hourly wages rather than weekly wages.
- labor would like both payment methods (cash/online) equally therefore software should contain secure payment methods.
- Labor can apply for life insurance by software.
- Companies/factories should not give work to people below 18.
- If labors feel any inconvenience in machines then they can complain by software.
- If labors want leave except holidays they can apply or request for leave also.

5. User Categories and Privileges

- **Company/factory Owner:**

Company Admin can add details about company and also can modify details of company.

- **Company/factory Manager :**

A manager is at a higher level in an organization than a supervisor. Managers can modify the salary of supervisor and labor as well and also approve leave requests of supervisor and labor.

- **Company/factory Supervisor :**

A supervisor is at a higher level in an organization than a labors. Supervisors can modify the salary of labor as well and also approve leave requests of labor.

- **Company/factory Labor :**

Labor is at a lower level in an organization.labor can see details about the company/factory and apply for that company/factory to work.labor can also request to increase wages and also request for leaves.

6. Assumptions :

- All labors and supervisor who want to work in company/factory have a smartphone to apply for work.
- All labors and supervisors can able to understand software language.
- All labors and supervisor have a bank account in any of the banks.
- Company/factory is following all the rule of labor act which has been given by the government.
- Labor and Supervisor have online net banking account if the company/factory follows an online payment system.

7. Business Constraints :

- Some labors and supervisors who want to work in a company/factory do not have a smartphone to apply for work.
- Some labors and supervisors can not able to understand software language.
- Some labors and supervisors do not have a bank account in any of the banks.
- Some companies/factories are not following all the rule of labor act which has been given by the government.
- Some Labors and Supervisors do not have online net banking accounts if the company/factory follows an online payment system.

Description:

- A Database management system is required to maintain and update all the information about labors, wages and the company details.
- All the basic facilities that are expected to be available like keeping a record of labors and their contact details, etc.
- Company/factory owner and the Supervisor will be assigned different roles.
- Company/factory also provide surety of safety of labors during working hours.
- Labors will be assigned different types of view permissions to show details about their wages,wages type and company details in which they are working
- Software should contain
 - Basic Information of company/factory,
 - amount of wages to be given to labors by company/factory
 - labor request to work in company/factory and allocation of work which suited for labor, Requests for improve wages by labors
 - Request for leaves by supervisors or labors=
 - Any deduction in wages against bad disciplinary actions by labors
 - working status of the activity and revenue generated from particular activity
- company/factory will be interested to use this software to store laborslist and their wages.
- Labors will be more interested to know the details about private companies/factories rather than the government.
- Most labors would prefer hourly wages rather than weekly wages.
- labor would like both payment methods (cash/online) equally therefore software should contain secure payment methods.
- Labor can apply for life insurance by software.
- Companies/factories should not give work to people below 18.
- If labors feel any inconvenience in machines then they can complain by software.
- If labors want leave except holidays they can apply or request for leave also.

The system contains the following tables:

- 1. Regions**
- 2. Company_deatils**
- 3. Labors**
- 4. Work_history**
- 5. Department**
- 6. Locations**
- 7. Leave**
- 8. Wages**
- 9. Supervisor**
- 10. Manager**
- 11. Owner**

The user can get the following information about the project from the given system:

- **Regions:** region_id,region_name
 - In this table region_id is primary key
 - This shows the basic details about the region of the company.
- **Company_details:** company_id,company_type,street_add,highest_no_worker,region_id
 - In this table company_id is primary key.
 - Here all the labors and supervisors can view the company details if they want to work in a particular company.
- **Labors:** labor_id,first_name,last_name,gender,phone_no,dept_id,company_id,supervisor_id,age,wage,hire_date,region_id,address,labor_type
 - In this table labor_id is primary key; dept_id and company_id are foreign keys.
 - Here all labors and supervisors of the company/factory can view basic details/information about labor.
- **Work_history:** labor_id,start_date,end_date,dept_id,company_id
 - In this table labor_id is primary key; company_id and dept_id are foreign keys.

Company/factory can view the work history of all labors like start date and end date.

- **Department:** dept_id,name,wages_range,company_id
 - In this table dept_id is primary key and company_id is foreign key.

Here supervisor or owner can modify the wages range according to requests of wages by labors.

- **Locations:** street_add,pin_code,city,state,country,region_id
 - in this table pin_code is primary key and region_id is foreign key

Here labors can select and view their work locations.

- **Leave:** leave_id,labor_id,date,reason
 - in this table leave_id is primary key and labor_id is foreign key
- Here labors can apply or request for leave due to any emergency or illness only.

- **Wages:** wages_id,labor_id,dept_id,payment_id,date,receipt,total_amount,wages_type
 - in this table wages_id is primary key and labor_id is foreign key

Here supervisors can see wages details of their labors which have already been paid and Labors can view receipt of their wages.

- **supervisor:** supervisor_id,f_name,l_name,gender,phone_no,dept_id,company_id,salary,hire_date,region_id,manager_id,address
 - in this table supervisor_id is primary key; dept_id and company_id are foreign keys.

Here all supervisors of the company/factory can view basic details/information about labor.

- **Manager:** manager_id,f_name,l_name,gender,phone_no,dept_id,company_id,salary,hire_date,region_id,address

- in this table manager_id is primary key; dept_id and company_id are foreign keys.

Here all Manager of the company/factory can view basic details/information about labor and supervisor.

- **Owner:** owner_id,f_name,l_name,gender,phone_no,company_id,address

- in this table owner_id is primary key; company_id is foreign keys.

Owner of the company/factory can view basic details/information about manager, labor and supervisor.

Section 2 : Noun & Verb Analysis

1. Noun (Verb) Analysis:

Sr. no.	Noun	Verb
1	Management system	be
2	city	
3	district	
4	Labor information	record
5	labor	work
6	supervisor	Monitor
7	company	working
8	owner	
9	manager	
10	record	keep
11	factory	
12	contact details	keep
13	wage	give
14	leave	request
15	revenue	generate
16	software	store
17	cash	pay
18	Online banking	pay
19	Wages type	prefer

20	Company type	interest
21	Life insurance	provide
22	machine	complain
23	holiday	request
24	Region	
25	age	
26	gender	
27	Details	Modify
28	state	
29	Country	
30	Street	
31	Address	add/remove
32	Salary	Credit
33	Location	
34	date	
35	Hire date	record
36	precautionary thing	
37	accident	
38	Minimum wage	need
39	Pay slip	provide
40	organization	Goal

2. Accepted Noun or verb list

Sr No	Candidate entity set	Candidate attribute set	Candidate relationship set
1	labor	Labor id,first name,last name,gender,phone no,dept id,company id,supervisor id,age,wage,hire date,region id,address,labor type	work_in
2	supervisor	Supervisor id,first name,last name,gender,phone no,dept id,company id,salary,hire date,region id,manager id,address	monitor,manage
3	manager	Manager id,first name,last name,gender,phone no,dept id,company id,salary,hire date,region id,address	manage
4	owner	Owner id,first name,last name,gender,phone no,company id,address	manage
5	Company details	Company id,company type,street add,highest no. worker,region id	-
6	region	Region id,region name	

7	Work history	Labor id,start date,end date,dept id,company id	
8	location	Street add,pin code,city,state,country,location_id	
9	Department	Dept id,name,wages range,company id	
10	leave	Leave id,labor id, date,reason	has
11	wages	wages id,labor id, dept id,payment id,date,receipt,total amount,wages type	gets

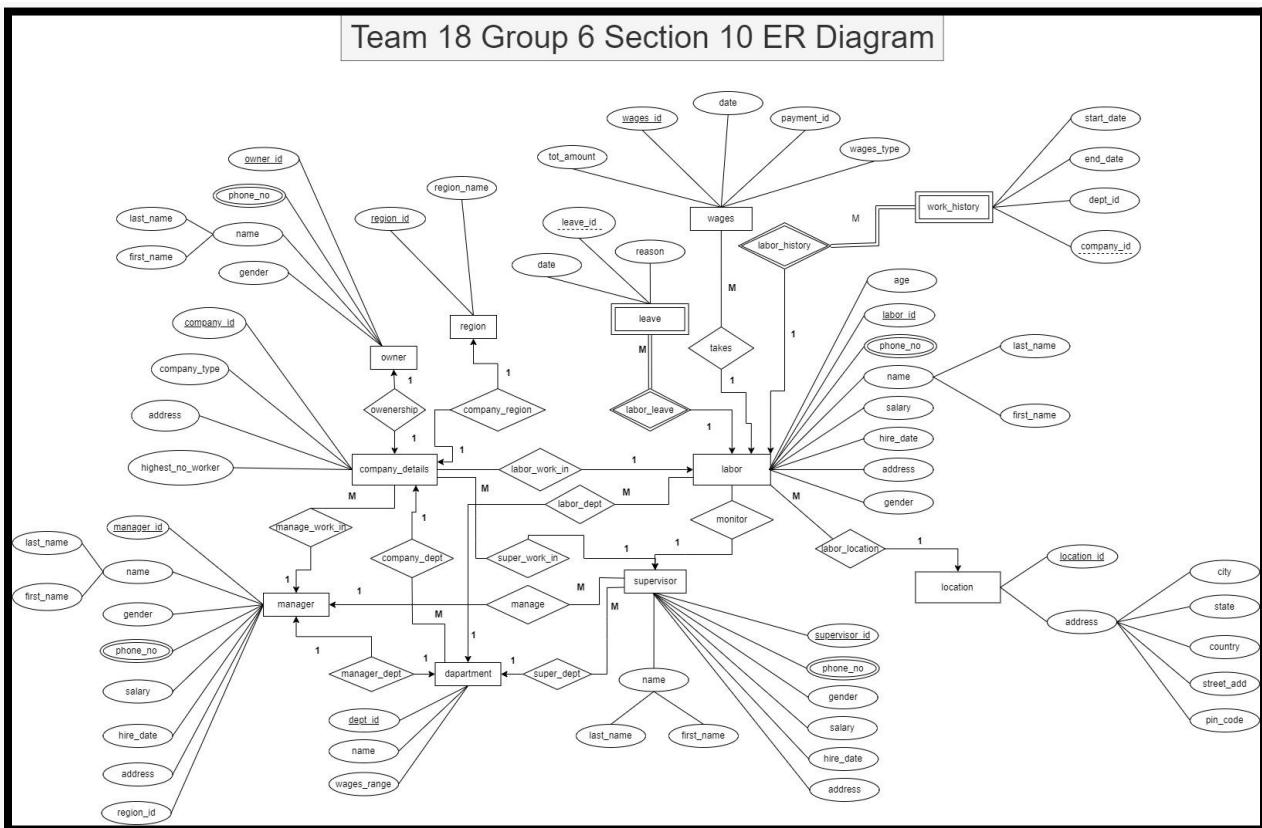

3. Rejected Nouns or verbs:

Sr no.	Noun	Reject reason
1	Management system	General
2	date	vague
3	precautionary thing	Irrelevant
4	Accident	Irrelevant
5	revenue	Irrelevant
6	Monitor	Irrelevant
7	Be	General
8	Keep	General

9	add/remove	General
10	software	General
11	holiday	vague
12	Minimum wage	vague
13	Organization	General
14	Goal	Irrelevant
15	Provide	Irrelevant
16	Need	Irrelevant
17	complain	Irrelevant
18	Life insurance	vague

Section 3 : ER Diagrams

ER Diagram: (Final Version)

Section 4 : Mapping E-R model to Relational Model

2. Mapping E-R model to Relational Model:

- **Regions**(region_id,region_name)
→ In this table region_id is primary key
- **Company_details**(company_id,company_type,street_add,highest_no_worker,region_id)
→ In this table company_id is primary key.
- **Labors**(labor_id,first_name,last_name,gender,dept_id,company_id,supervisor_id,age,wage,hire_date,location_id,address,labor_type)
→ In this table labor_id is primary key;
dept_id,supervisor_id,location_id and company_id are foreign keys.
- **Work_history**(labor_id,dept_id,company_id,start_date,end_date)
→ In this table labor_id,company_id and dept_id are composite primary key;
labor_id is foreign key.
- **Department**(dept_id,name,wages_range,company_id)
→ In this table dept_id is primary key;
company_id is foreign key.
- **Locations**(location_id,street_add,city,state,country)
→ in this table pin_code is primary key
- **Leave**(leave_id,labor_id,date,reason)
→ in this table leave_id is primary key;
labor_id is foreign key
- **Wages**(wages_id,payment_no,labor_id,date,total_amount,wages_type)
→ in this table wages_id and payment_no are composite primary key;

labor_id is foreign key

- **supervisor(supervisor_id,first_name,last_name,gender,dept_id,company_id,location_id,salary,hire_date,manager_id,address)**
 - in this table supervisor_id is primary key;
dept_id,location_id,manager_id and company_id are foreign keys.
- **Manager(manager_id,first_name,last_name,gender,dept_id,company_id,location_id,salary,hire_date,address)**
 - in this table manager_id is primary key;
dept_id, location_id and company_id are foreign keys.
- **Owner(owner_id,first_name,last_name,gender,company_id,address)**
 - in this table owner_id is primary key;
company_id is foreign key.
- **Labor_phone(labor_id, phone_no)**
 - in this table labor_id and phone_no is composite primary key;
labor_id is foreign key
- **Supervisor_phone(supervisor_id, phone_no)**
 - in this table supervisor_id and phone_no is composite primary key;
supervisor_id is foreign key
- **Owner_phone(owner_id, phone_no)**
 - in this table owner_id and phone_no is composite primary key;
owner_id is foreign key
- **Manager_phone(manager_id, phone_no)**
 - in this table manager_id and phone_no is composite primary key;
Manager is foreign key

3. Create DDL Scripts

Region

```
CREATE TABLE IF NOT EXISTS "labor_wages_T18".region

Section 5 : Normalization & Schema Refinement

❖ Normalization and Schema refinement:

1. Functional Dependencies:

- **Regions**(region_id → region_name)
- **Company_details**(company_id → company_type, company_name, street_address, highest_no_worker, region_id)
- **Labors**(labor_id → first_name, last_name, dept_id, company_id, supervisor_id, wage, hire_date, location_id, labor_type, gender, age, address)
- **supervisor**(supervisor_id → first_name, last_name, dept_id, company_id, location_id, salary, hire_date, manager_id, gender, address)
- **Manager**(manager_id → first_name, last_name, dept_id, company_id, location_id, salary, hire_date, gender, address)
- **Owner**(owner_id → first_name, last_name, company_id, first_name, last_name → gender, address)
- **Department**(dept_id → name, wages_range, company_id)
- **Locations**(location_id → street_add, city, state, country)
- **Leave**(leave_id → labor_id, date, reason)
- **Wages**(wages_id, payment_no → labor_id, wages_type, date, total_amount)
- **Work_history**(labor_id, dept_id, company_id → start_date, end_date)
- **Labor_phone**: No dependencies
- **Supervisor_phone**: No dependencies

- **Owner_phone:** No dependencies
- **Manager_phone:** No dependencies

❖ Redundancies and Anomalies:

- **Regions(region_id,region_name)**

region_id is the primary key Which can't be NULL.

There is no redundancy in this relation.

There are no transitive dependencies.

There are no anomalies in this relation

- **Company_details(company_id,company_name,company_type,street_add,highest_no_worker,region_id)**

company_id is the primary key Which can't be NULL.

Foreign Key region_id references to regions.

There is no redundancy in this relation.

There are no transitive dependencies.

There are no anomalies in this relation

- **Labors(labor_id,first_name,last_name,gender,dept_id,company_id,supervisor_id,age,wage,hire_date,location_id,address,labor_type)**

labor_id is the primary key Which can't be NULL.

Foreign Key dept_id references to Department.

Foreign Key company_id references to Company_details.

Foreign Key supervisor_id references to Supervisor.

Foreign Key location_id references to Location.

Redundancy: we can drop location_id , dept_id and company_id because we have references to supervisor which references to manager which already contain location_id,dept_id and company_id.

- **supervisor**(supervisor_id,first_name,last_name,gender,dept_id,company_id,location_id,salary,hire_date,manager_id,address)

supervisor_id is the primary key Which can't be NULL.

Foreign Key dept_id references to Department.

Foreign Key company_id references to Company_details.

Foreign Key manager_id references to Manager.

Foreign Key location_id references to Location.

Redundancy: we can drop location_id , dept_id and company_id because we have references to manager which already contain location_id,dept_id and company_id.

- **Manager**(manager_id,first_name,last_name,gender,dept_id,company_id,location_id,salary,hire_date,address)

manager_id is the primary key Which can't be NULL.

Foreign Key dept_id references to Department.

Foreign Key company_id references to Company_details.

Foreign Key location_id references to Location.

Redundancy: There could be multiple location_id associated with one labor if he already worked at some place earlier and not work at other branch.

- **Owner**(owner_id,first_name,last_name,gender,company_id,address)

There are no anomalies in this entity.

owner_id is the primary key Which can't be NULL.

Foreign Key company_id references to Company_details.

Because of the above dependency, we also get a transitive dependency.

So we can remove this dependency by adding a new table of

- **Work_history**(labor_id,dept_id,company_id,start_date,end_date)

labor_id,company_id and dept_id are composite primary keys, Which can't be NULL.

Foreign key labor_id references Labors
There is no transitive dependency.

- **Department**(dept_id,name,wages_range,company_id)

dept_id is the primary key Which can't be NULL.
Foreign Key company_id references to Company_details.
There is no redundancy in this relation.
There are no transitive dependencies.
There are no anomalies in this relation.

- **Locations**(location_id,street_add,city,state,country)

Location_id is the primary key Which can't be NULL.
There is no redundancy in this relation.
There are no transitive dependencies.
There are no anomalies in this relation.

- **Leave**(leave_id,labor_id,date,reason)

leave_id is the primary key Which can't be NULL.
Foreign Key labor_id references to labors.
There is no redundancy in this relation.
There are no transitive dependencies.

→ Anomalies:

Insert: We can not add a reason until it is not associated with leave id.

Delete: If we delete the tuple of a particular reason, then it will also delete information about a specific leave of labor.

Update: We have to update maintenance priority for the same reason every time.

- **Wages**(wages_id,payment_no,labor_id,date,total_amount,wages_type)

Wages_id and payment_no are the primary keys which can't be NULL.
Foreign Key labor_id references to labors.
There is no redundancy in this relation.
There are no transitive dependencies.

- **Labor_phone(labor_id, phone_no)**

in this table labor_id and phone_no is composite primary key;
labor_id is foreign key which can't be NULL
There is no redundancy in this relation.
There are no transitive dependencies.

- **Supervisor_phone(supervisor_id, phone_no)**

in this table supervisor_id and phone_no is composite primary
key, supervisor_id is foreign key which can't be NULL
There is no redundancy in this relation.
There are no transitive dependencies.

- **Owner_phone(owner_id, phone_no)**

in this table owner_id and phone_no is composite primary key;
owner_id is a foreign key which can't be NULL
There is no redundancy in this relation.
There are no transitive dependencies.

- **Manager_phone(manager_id, phone_no)**

manager_id and phone_no is composite primary key; Manager is a foreign
key which can't be NULL.
There is no redundancy in this relation.
There are no transitive dependencies.

- ❖ **Normalization upto 3NF/BCNF**

- **Regions(region_id, region_name)**

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Company_details**(company_id,company_name,company_type,street_add ,highest_no_worker,region_id)

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

Every candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Labors**(labor_id,first_name,last_name,gender,dept_id,company_id,supervisor_id,age,wage,hire_date,location_id,address,labor_type)

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

Every candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Work_history**(labor_id,dept_id,company_id,start_date,end_date)

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

Every candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Department**(dept_id,name,wages_range,company_id)

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Locations**(location_id,street_add,city,state,country)

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Leave**(leave_id,labor_id,date,reason)

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Wages**(wages_id,payment_no,labor_id,date,total_amount,wages_type)

Since every attribute value is atomic the relation is in 1NF.

Since there are two values in PK and also there is only one candidate key the relation is in 2NF.

candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **supervisor**(supervisor_id,first_name,last_name,gender,dept_id,company_id,location_id,salary,hire_date,manager_id,address)

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

Every candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Manager**(manager_id,first_name,last_name,gender,dept_id,company_id,location_id,salary,hire_date,address)

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

Every candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Owner**(owner_id,first_name,last_name,gender,company_id,address)

Since every attribute value is atomic the relation is in 1NF.

Since every attribute value is atomic the relation is in 1NF.

Since there is only one value in PK and also there is only one candidate key the relation is in 2NF.

Every candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Labor_phone**(labor_id, phone_no)

Since every attribute value is atomic the relation is in 1NF.

Since there are two values in PK and also there is only one candidate key the relation is in 2NF.

candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Supervisor_phone**(supervisor_id, phone_no)

Since every attribute value is atomic the relation is in 1NF.

Since there are two values in PK and also there is only one candidate key the relation is in 2NF.

candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Owner_phone**(owner_id, phone_no)

Since every attribute value is atomic the relation is in 1NF.

Since there are two values in PK and also there is only one candidate key the relation is in 2NF.

candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

- **Manager_phone**(manager_id, phone_no)

Since every attribute value is atomic the relation is in 1NF.

Since there are two values in PK and also there is only one candidate key the relation is in 2NF.

candidate key is on LHS of the functional dependencies so the relation is in BCNF.this implies that the relation is in 3NF.

❖ List of Final relations with schema:

- **Regions**(region_id,region_name)

→ In this table region_id is primary key

- **Company_details**(company_id,company_type,street_add,highest_no_worker,region_id,company_name)

→ In this table company_id is primary key.

- **Labors**(labor_id,first_name,last_name,gender,supervisor_id,age,wage,hire_date,address,labor_type)

→ In this table labor_id is primary key; dept_id, supervisor_id, location_id and company_id are foreign keys.

- **Work_history**(labor_id,dept_id,company_id,start_date,end_date)

→ In this table labor_id,company_id and dept_id are composite primary key; labor_id is foreign key.

- **Department**(dept_id,name,wages_range,company_id)

→ In this table dept_id is primary key; company_id is foreign key.

- **Locations**(location_id,street_add,city,state,country)
→ in this table pin_code is primary key
- **Leave**(leave_id,labor_id,date,reason)
→ in this table leave_id is primary key;
labor_id is foreign key
- **Wages**(wages_id,payment_no,labor_id,date,total_amount,wages_type)
→ in this table wages_id and payment_no are composite primary key;
labor_id is foreign key
- **supervisor**(supervisor_id,first_name,last_name,gender,salary,hire_date,m
anager_id,address)
→ in this table supervisor_id is primary key; dept_id,location_id,
manager_id and company_id are foreign keys.
- **Manager**(manager_id,first_name,last_name,gender,dept_id,company_id,lo
cation_id,salary,hire_date,address)
→ in this table manager_id is primary key;
dept_id, location_id and company_id are foreign keys.
- **Owner**(owner_id,first_name,last_name,gender,company_id,address)
→ in this table owner_id is primary key;
company_id is foreign key.
- **Labor_phone**(labor_id, phone_no)
→ in this table labor_id and phone_no is composite primary key;
labor_id is foreign key
- **Supervisor_phone**(supervisor_id, phone_no)
→ in this table supervisor_id and phone_no is composite primary key;
supervisor_id is foreign key
- **Owner_phone**(owner_id, phone_no)
→ in this table owner_id and phone_no is composite primary key;
owner_id is foreign key

- **Manager_phone(manager_id, phone_no)**
 → in this table manager_id and phone_no is composite primary key;
 Manager is foreign key

Section 6 : DDL Scripts

❖ DDL Scripts

Region

Section 7 : SQL Queries

❖ SQL Queries:

1) Show all company details.

```
select *  
from "labor_wages_T18".company_details
```

The screenshot shows the pgAdmin 4 interface with a query editor and a data output viewer. The query editor contains the SQL command: `select * from "labor_wages_T18".company_details`. The data output viewer displays a table with 90 rows of company data. The columns are: company_id [PK] integer, company_type character varying, street_add character varying, highest_no_worker integer, region_id integer, and company_name character varying. The table includes rows for various companies like AECOM, Comodo, Leadertech Cons., Amazon.com, Carrefour, Vodafone, BuzzFeed, Coca-Cola Comp..., Apple Inc., 21st Century Fox, Mars, and ENFI. The total number of rows is 90, and the query was completed at 00:00:00.562.

	company_id [PK] integer	company_type character varying	street_add character varying	highest_no_worker integer	region_id integer	company_name character varying
1	1	Government	Tilloch Route	361	26	AECOM
2	2	Government	Canning Boulevard	236	37	Comodo
3	3	Private	Beechen Alley	444	30	Leadertech Cons...
4	4	Private	Camberwell Grove	409	2	Amazon.com
5	5	Government	Coalecroft Street	314	29	Carrefour
6	6	Government	Hamilton Tunnel	298	23	Vodafone
7	7	Government	Sundown Rue	409	14	BuzzFeed
8	8	Government	Maple Hill	453	23	Coca-Cola Comp...
9	9	Government	Ellerslie Grove	114	8	Apple Inc.
10	10	Government	Badrin Tunnel	245	34	21st Century Fox
11	11	Government	Hamilton Lane	159	7	Mars
12	12	Government	Gloth Lane	441	30	ENFI

- There is a total of 90 company data in this database.

2) Show Labor details with hourly wages type.

```
select *  
from "labor_wages_T18".labors  
where "labor_wages_T18".labors.labor_type = 'hourly'
```

The screenshot shows the pgAdmin 4 interface. The left sidebar displays the database schema with tables like company_details, department, leave, location, manager, owner, region, and supervisor. The supervisor table is expanded, showing columns: labor_id (PK), first_name, last_name, gender, supervisor_id, age, wage, hire_date, address, and labor_type. A query window in the center contains the following SQL code:

```
1 select *  
2 from "labor_wages_T18".labors  
3 where "labor_wages_T18".labors.labor_type = 'hourly'
```

The results pane below shows the output of the query, listing 189 rows of labor data. The columns are: labor_id, first_name, last_name, gender, supervisor_id, age, wage, hire_date, address, and labor_type. The data includes names like Candace Hogg, Julius Willis, Jasmine Judd, Ally Ellis, Kimberly Utley, Oliver Bullock, Chad Bayliss, Florence King, Macy Ebden, Margaret James, Boris Rothwell, and Rae Gordon, along with their respective details and 'hourly' labor type.

	labor_id	first_name	last_name	gender	supervisor_id	age	wage	hire_date	address	labor_type
1	1	Candace	Hogg	Female	304	55	1504	2023-01-20	Seattle	hourly
2	3	Julius	Willis	Male	284	46	2043	2023-05-03	Atlanta	hourly
3	4	Jasmine	Judd	Female	9	46	1208	2022-05-16	Milwaukee	hourly
4	5	Ally	Ellis	Female	359	52	1390	2022-05-12	Bridgeport	hourly
5	16	Kimberly	Utley	Female	192	53	1165	2022-07-23	Seattle	hourly
6	17	Oliver	Bullock	Male	43	36	1784	2022-03-14	Venice	hourly
7	19	Chad	Bayliss	Male	58	16	2386	2021-12-10	New York	hourly
8	20	Florence	King	Female	268	32	1862	2022-08-08	Rochester	hourly
9	21	Macy	Ebden	Female	126	25	2845	2022-04-07	Louisville	hourly
10	32	Margaret	James	Female	78	39	1285	2023-04-21	Honolulu	hourly
11	33	Boris	Rothwell	Male	233	28	2326	2022-09-23	San Bernardino	hourly
12	35	Rae	Gordon	Female	249	26	639	2022-12-17	Indianapolis	hourly

- Total Number of labors with hourly wages type is 189.

3) Show Labors with wages greater than 1000.

```
select *  
from "labor_wages_T18".labors  
where "labor_wages_T18".labors.wage > 1000
```

The screenshot shows the pgAdmin 4 interface with the following details:

- Browser:** Shows the database schema with 15 tables: company_details, department, labor_phone, labors, leave, location, manager, manager_phone, owner, owner_phone, region, and supervisor.
- Query Editor:** Displays the SQL query:

```
1 select *  
2 from "labor_wages_T18".labors  
3 where "labor_wages_T18".labors.wage > 1000
```
- Data Output:** Shows the results of the query, listing 12 rows of labor data. The columns are: labor_id, first_name, last_name, gender, supervisor_id, age, wage, hire_date, address, and labor_type. The data includes various names like Candace Hogg, Carson, Julius Willis, Jasmine Judd, Ally Ellis, Gil Utley, Enoch Simmons, Nathan Ward, Jamie Hamilton, Jaylene Woodcock, Bryce Brown, and Destiny Andrews, along with their respective details.
- Message:** At the bottom, it says "Total rows: 488 of 488 Query complete 0:00:00.806 Ln 2, Col 30".

- Total No of labors with hourly wages type is 488.

4) Show the Total number of female labors.

>

```
select *  
from "labor_wages_T18".labors  
where "labor_wages_T18".labors.gender = 'Female'
```

The screenshot shows the pgAdmin 4 interface. In the left sidebar, under the 'Tables' section, there is a list of tables including 'company_details', 'department', 'labor', 'leave', 'location', 'manager', 'manager_phone', 'owner', 'owner_phone', 'region', and 'supervisor'. The 'supervisor' table is currently selected, and its detailed structure is shown in the center-left panel, listing columns such as 'supervisor_id' (PK), 'first_name', 'last_name', 'gender', 'supervisor_id', 'age', 'wage', 'hire_date', 'address', and 'labor_type'. A query window at the top contains the following SQL code:

```
1 select *  
2 from "labor_wages_T18".labors  
3 where "labor_wages_T18".labors.gender = 'Female'|
```

The main right panel displays the results of the query, which is a table titled 'Data output' showing 300 rows of female laborer data. The columns correspond to the ones listed in the 'supervisor' table's structure. The results show various details for each laborer, such as their first name, last name, gender (Female), supervisor ID, age, wage, hire date, address, and labor type. The table has 12 columns and 300 rows. At the bottom of the results pane, it says 'Total rows: 300 of 300 Query complete 00:00:00.132' and 'Ln 3, Col 49'.

- There are a total 300 Female labors.

5) Show labors details in ascending order of their wages.

➤

```
select *  
from "labor_wages_T18".labors  
order by "labor_wages_T18".labors.wage asc
```

The screenshot shows the pgAdmin 4 interface. The left sidebar displays the database schema with tables like company_details, department, leave, location, manager, owner, region, and supervisor. The supervisor table is expanded, showing columns: labor_id [PK] integer, first_name character varying, last_name character varying, gender character varying, supervisor_id integer, age integer, wage bigint, hire_date date, address character varying, and labor_type character varying. A query window in the center contains the following SQL code:

```
1 select *  
2 from "labor_wages_T18".labors  
3 order by "labor_wages_T18".labors.wage asc
```

The results pane shows the output of the query, listing 12 rows of labor data. The columns correspond to the supervisor table structure. The data includes names like Angelica Morris, Lucas Jackson, John Tanner, Brooklyn Funnell, David Crawford, Carl Gonzales, Enoch Cartwright, Johnny Shields, Anthony Emmett, Aleksandra Baxter, Lynn Ainsworth, Amy Clifford, and their respective details such as age, wage, hire date, and address.

	labor_id	first_name	last_name	gender	supervisor_id	age	wage	hire_date	address	labor_type
1	592	Angelica	Morris	Female		83	39	2022-06-22	Chicago	hourly
2	343	Lucas	Jackson	Male		394	40	2022-05-31	Rome	weekly
3	392	John	Tanner	Male		90	16	2022-04-14	Jersey City	weekly
4	439	Brooklyn	Funnell	Female		20	49	2022-07-03	Innsbruck	weekly
5	103	David	Crawford	Male		292	57	2023-04-09	San Antonio	weekly
6	231	Carl	Gonzales	Male		234	38	2022-07-10	Columbus	weekly
7	106	Enoch	Cartwright	Male		319	25	2022-05-07	Lisbon	weekly
8	382	Johnny	Shields	Male		34	44	2022-02-04	Arlington	weekly
9	229	Anthony	Emmett	Male		163	53	2023-08-07	Rome	hourly
10	61	Aleksandra	Baxter	Female		115	20	2022-07-22	Houston	weekly
11	298	Lynn	Ainsworth	Female		238	43	2022-09-26	Glendale	weekly
12	26	Amy	Clifford	Female		51	21	2022-10-18	San Diego	weekly

- There are a total 600 labors.

6) show the work history of the workers who have worked before.

```
select *\nfrom "labor_wages_T18".work_history
```

The screenshot shows the pgAdmin 4 interface with the following details:

- Servers:** PostgreSQL 14
- Databases:** labor_wages_T18
- Query Editor:** Query History
- Query:** `select *\nfrom "labor_wages_T18".work_history`
- Data Output:** A table showing the results of the query. The columns are: labor_id, dept_id, company_id, start_date, end_date. The data consists of 120 rows.

labor_id	dept_id	company_id	start_date	end_date	
1	124	50	2020-01-20	2022-01-20	
2	335	60	2019-01-21	2022-01-20	
3	569	3	22	2020-01-22	2022-01-20
4	432	23	23	2020-01-20	2022-01-20
5	231	71	44	2019-01-21	2022-01-20
6	514	54	77	2020-01-22	2022-01-20
7	30	3	75	2020-01-20	2022-01-20
8	297	52	32	2019-01-21	2022-01-20
9	49	35	51	2020-01-21	2022-01-20
10	540	67	41	2020-01-21	2022-01-20
11	260	15	19	2019-01-21	2022-01-20
12	315	76	37	2020-01-22	2022-01-20
13	490	60	46	2020-01-20	2022-01-20

Total rows: 120 of 120 Query complete 00:00:00.250 Ln 1, Col 1

- There are total 120 labors who worked before.

7) show the details of labors who worked under a supervisor whose id is 17.

```
select *\nfrom "labor_wages_T18".labors\nwhere "labor_wages_T18".labors.supervisor_id = 17
```

The screenshot shows the pgAdmin 4 interface. On the left, the 'Browser' pane displays the database schema with tables like company_details, department, labor_phone, labors, leave, location, manager, manager_phone, owner, owner_phone, region, and supervisor. The supervisor table is currently selected. The 'Query' pane at the top contains the SQL query:

```
1 select *\n2 from "labor_wages_T18".labors\n3 where "labor_wages_T18".labors.supervisor_id = 17
```

The 'Data' pane on the right shows the results of the query:

last_name	gender	supervisor_id	age	wage	hire_date	address	labor_type
Skinner	Female	17	57	640	2023-08-10	Tulsa	weekly
Brock	Female	17	41	2820	2022-02-08	Phoenix	hourly

Total rows: 2 of 2 Query complete 00:00:00.203 Ln 4, Col 1

- There are only 2 labors who worked under supervisor id 17.

8) show the details of labors whose age is more than 50.

```
select *\nfrom "labor_wages_T18".labors\nwhere "labor_wages_T18".labors.age > 50
```

The screenshot shows the pgAdmin 4 interface. The left sidebar displays the database schema with tables like company_details, department, labor_phone, labors, leave, location, manager, manager_phone, owner, owner_phone, region, and supervisor. The supervisor table is selected, showing its 8 columns: supervisor_id, first_name, last_name, gender, supervisor_id, age, wage, hire_date, address, and labor_type. The main area contains a query editor with the following SQL code:

```
1\n2\n3 select *\n4 from "labor_wages_T18".labors\n5 where "labor_wages_T18".labors.age > 50\n6
```

The results pane shows a table with 121 rows of labor data. The columns are: labor_id, first_name, last_name, gender, supervisor_id, age, wage, hire_date, address, and labor_type. The data includes various names like Candace Hogg, Gil Carson, Ally Ellis, Nathan Ward, Jamie Hamilton, Valentina Hunter, etc., along with their respective ages (e.g., 304, 58, 359, 53, 210, 7, 321, 192, 24, 280, 266, 206, 205) and wages (e.g., 1504, 2632, 1390, 1864, 2393, 1601, 1277, 1165, 2469, 2521, 1164, 2296, 2085). The 'address' column lists locations like Seattle, Hollywood, Bridgeport, Phoenix, Madrid, Wien, Reno, Seattle, Baltimore, Venice, Miami, Lakewood, and Phoenix. The 'labor_type' column indicates whether the labor is hourly or weekly.

labor_id	first_name	last_name	gender	supervisor_id	age	wage	hire_date	address	labor_type
1	Candace	Hogg	Female	304	55	1504	2023-01-20	Seattle	hourly
2	Gil	Carson	Male	234	58	2632	2022-02-19	Hollywood	weekly
3	Ally	Ellis	Female	359	52	1390	2022-05-12	Bridgeport	hourly
4	Nathan	Ward	Male	335	53	1864	2023-01-12	Phoenix	weekly
5	Jamie	Hamilton	Female	210	51	2393	2023-01-07	Madrid	weekly

- There are a total of 400 supervisors.

10) show the details of a supervisor who has worked under a manager whose id is 13.

```
select *  
from "labor_wages_T18".supervisor  
where "labor_wages_T18".supervisor.manager_id = 13
```

The screenshot shows the pgAdmin 4 interface with a query editor and a data output window. The query is:

```
1 select *  
2 from "labor_wages_T18".supervisor  
3 where "labor_wages_T18".supervisor.manager_id = 13
```

The data output window displays the results of the query:

	supervisor_id	first_name	last_name	gender	salary	hire_date	manager_id	address
1	123	Hayden	Oliver	Female	21602	2021-10-16	13	Lyon
2	300	Audrey	York	Female	18065	2021-11-10	13	Norfolk
3	317	Regina	Norton	Female	15555	2023-05-01	13	San Antonio

Total rows: 3 of 3 Query complete 00:00:00.067 Ln 4, Col 1

- There are a total of 3 supervisors who has worked under the manager with id 13.

11) Show the details of supervisors who worked at dept id 5.

```
select *  
from "labor_wages_T18".supervisor  
where "labor_wages_T18".supervisor.manager_id = some (select  
"labor_wages_T18".manager.manager_id from  
"labor_wages_T18".manager where "labor_wages_T18".manager.dept_id  
= 5)
```

The screenshot shows the pgAdmin 4 interface with a query editor and a data output tab. The query editor contains the SQL code provided above. The data output tab displays a table with 12 rows of supervisor details. The columns are: supervisor_id, first_name, last_name, gender, salary, hire_date, manager_id, and address. The data includes names like Camelia, Liam, Erica, Mark, Carol, Belinda, Claire, Hadley, Sasha, Eduardo, Russel, and Ema, along with their respective details such as hire dates (e.g., 2021-10-08, 2022-08-27) and addresses (e.g., Oakland, Garland, Fullerton, Long Beach, Norfolk, Pittsburgh, Honolulu, London, Columbus, Cincinnati, San Antonio, Jacksonville).

	supervisor_id	first_name	last_name	gender	salary	hire_date	manager_id	address

Total rows: 11 of 11 Query complete 00:00:00.052 Ln 3, Col 103

- There are total 11 labors who have worked at dept id 25.

15) Show the details of labors who has worked at company id 18.

>

```
select *
from "labor_wages_T18".labors
where "labor_wages_T18".labors.supervisor_id = some (select
"labor_wages_T18".supervisor.supervisor_id
from "labor_wages_T18".supervisor
where "labor_wages_T18".supervisor.manager_id = some (select
"labor_wages_T18".manager.manager_id
from "labor_wages_T18".manager
where "labor_wages_T18".manager.company_id = 18))
```

The screenshot shows the pgAdmin 4 interface with the following details:

- Browser:** Shows the database schema with tables like 'company_details', 'department', 'labor_phone', 'labors', 'leave', 'location', 'manager', and 'manager_phone'. The 'Columns (2)' section under 'manager_phone' is currently selected.
- Query Editor:** Contains the executed SQL query and its results. The results table has columns: labor_id, first_name, last_name, gender, supervisor_id, age, wage, hire_date, address, and labor_type. The data is as follows:

	labor_id	first_name	last_name	gender	supervisor_id	age	wage	hire_date	address	labor_type
1	153	Maia	Larkin	Female	385	44	1789	2022-04-29	Santa Ana	weekly
2	183	Skylar	Gibbons	Female	385	31	2318	2021-09-06	Jersey City	weekly

- Data output:** Shows the total rows (2 of 2) and the query completion time (00:00:00.104).

- There are total 2 labors who have worked at company id 18.

16) Show the details of labors who has worked at location id 7.

```
select *
from "labor_wages_T18".labors
where "labor_wages_T18".labors.supervisor_id = some (select
"labor_wages_T18".supervisor.supervisor_id
from "labor_wages_T18".supervisor
where "labor_wages_T18".supervisor.manager_id = some (select
"labor_wages_T18".manager.manager_id
from "labor_wages_T18".manager
where "labor_wages_T18".manager.location_id = 7))
```

The screenshot shows the pgAdmin 4 interface. The left sidebar displays the database schema with tables like company_details, department, labor_phone, labors, leave, location, manager, manager_phone, and supervisor. The main window shows a query editor with the following SQL code:

```
1 select *
2 from "labor_wages_T18".labors
3 where "labor_wages_T18".labors.supervisor_id = some (select "labor_wages_T18".supervisor.supervisor_id
4 from "labor_wages_T18".supervisor
5 where "labor_wages_T18".supervisor.manager_id = some (select
6 "labor_wages_T18".manager.manager_id
7 from "labor_wages_T18".manager
8 where "labor_wages_T18".manager.location_id = 7))
```

The Data output tab shows the results of the query, which lists 18 supervisors. The columns are: labor_id, first_name, last_name, gender, supervisor_id, age, wage, hire_date, address, and labor. The data is as follows:

	labor_id	first_name	last_name	gender	supervisor_id	age	wage	hire_date	address	labor
1	121	Madelyn	Osmond	Female	365	38	1721	2022-01-12	Laredo	weekly
2	143	Chadwick	Moore	Male	108	40	2567	2023-03-27	San Diego	weekly
3	146	Eduardo	Adler	Male	271	40	1804	2022-01-18	Las Vegas	weekly

5	263	Logan	Penn	Male	246	59	2363	2023-03-11	Santa Ana	weekly
6	267	Emerald	Cox	Female	87	44	2784	2021-09-26	Tokyo	weekly
7	272	Gemma	Chester	Female	243	41	1961	2021-12-13	Venice	hourly

Total rows: 18 of 18 Query complete 00:00:00.072 Ln 2, Col 30

- There are total 18 supervisors who have worked at location id 7.

17) Find owner Details whose company is private and sort in order of owner id.

>

```
select *
from "labor_wages_T18".owner natural join
"labor_wages_T18".company_details
where "labor_wages_T18".company_details.company_type = 'Private'
order by "labor_wages_T18".owner.owner_id
```

The screenshot shows the pgAdmin 4 interface. The left sidebar displays a tree view of database objects, including tables like 'company_details', 'department', 'labor_phone', etc. The main area shows a query editor with the following SQL code:

```
1 select *
2 from "labor_wages_T18".owner natural join "labor_wages_T18".company_details
3 where "labor_wages_T18".company_details.company_type = 'Private'
4 order by "labor_wages_T18".owner.owner_id
5 |
```

Below the query editor is a data grid showing the results. The columns are:

company_id	owner_id	first_name	last_name	gender	address	company_type	street_addr	highest_no_worker	region_id	compar
1	3	Doug	Bristow	Male	College Avenue, ...	Private	Beechen Alley	444	30	LeaderI
2	4	Camden	Bright	Female	Underwood Boul...	Private	Camberwell Grove	409	2	Amazon

4	18	Carl	Rothwell	Male	Balfe Vale, 2377	Private	College Boulevard	490	12	Global I
5	19	Carl	Rigg	Male	Beatty Grove, 6104	Private	Under Drive	159	4	Amazon
6	20	Aiden	Greenwood	Male	Belmont Park Cr...	Private	Pine Boulevard	151	23	Comod
7	21	Denny	Wilkinson	Male	Arbutus Pass, 511	Private	Mariner Way	314	37	Comod
8	22	Caleb	Tait	Male	West Grove, 1769	Private	Charnwood Route	367	22	Coca-C
9	23	Kurt	Jones	Male	Erindale Way, 8561	Private	Bayberry Walk	174	4	Coca-C
10	24	Francesca	Carter	Female	Angrave Way, 4363	Private	Chesterfield Walk	384	17	Mars
11	29	Marjorie	Rose	Female	Angel Way, 2871	Private	Berriman Drive	193	34	BuzzFe
12	30	Makenna	Groves	Female	Sheffield Rue, 484	Private	North Grove	443	11	Vodaf

Total rows: 44 of 44 Query complete 00:00:06.455 Ln 5, Col 1

- There are only 44 owners with Private Company.

18) Display all the details of labors whose wages are greater than 1000 and wages type is weekly.

```
select *
from "labor_wages_T18".labors natural join "labor_wages_T18".wages
where "labor_wages_T18".wages.total_amount > 1000 and
"labor_wages_T18".wages.wages_type = 'weekly'
```

The screenshot shows the pgAdmin 4 interface. In the left sidebar, under the 'Tables' section, there is a table named 'wages' which is expanded to show its columns: 'wages_id', 'labor_id', 'first_name', 'last_name', 'gender', 'supervisor_id', 'age', 'wage', 'hire_date', 'address', 'labor_type', 'wages_id', and 'payment_no'. A blue selection bar highlights the 'wages_type' column. The main query editor window contains the following SQL code:

```
1 select *
2 from "labor_wages_T18".labors natural join "labor_wages_T18".wages
3 where "labor_wages_T18".wages.total_amount > 1000 and "labor_wages_T18".wages.wages_type = 'weekly'
```

The results pane displays a table with 259 rows of data, matching the structure of the 'wages' table. The data includes various laborer details like first name, last name, gender, age, wage, and address, along with their respective wage types and IDs. The total number of rows shown is 259, and the query took 0:00:28.958 to execute.

	labor_id	first_name	last_name	gender	supervisor_id	age	wage	hire_date	address	labor_type	wages_id	payment_no
1	2	Gil	Carson	Male	234	58	2632	2022-02-19	Hollywood	weekly	2	
2	9	Jamie	Hamilton	Female	210	51	2393	2023-01-07	Madrid	weekly	9	
3	13	Valentina	Hunter	Female	7	52	1601	2022-04-08	Wien	weekly	13	
4	15	Rosemary	Wright	Female	163	44	1882	2022-05-22	Anaheim	weekly	15	
5	27	Jacqueline	Fox	Female	137	50	1839	2023-06-09	Fremont	weekly	27	
6	29	Maddison	Yarlett	Female	275	48	1576	2022-04-10	San Antonio	weekly	29	
7	38	Mike	Jarvis	Male	205	56	2085	2022-02-11	Phoenix	weekly	38	
8	39	Rosie	Brown	Female	165	47	1843	2022-07-03	Fayetteville	weekly	39	
9	41	Andrea	Fisher	Female	156	38	1442	2022-04-21	Springfield	weekly	41	
10	43	Skyler	Simmons	Female	208	18	1354	2022-02-07	Jacksonville	weekly	43	
11	44	Aiden	Wellington	Male	399	30	858	2022-02-11	Oklahoma City	weekly	44	
12	46	Henry	Page	Male	36	21	2548	2022-05-23	El Paso	weekly	46	

- There are 259 labors whose wages are greater than 1000 and wages type is weekly.

19) Find the labor id for wages greater than 1000. Return a temp table with wages id, wages and first_name,last_name in the result table.

>

```
CREATE OR REPLACE function "labor_wages_T18".labor_wage()
RETURNS TABLE(l_id integer,wages bigint,f_name character
varying,l_name character varying)

Section 8 : Project Code with Output

Home Page

The screenshot shows a web browser window titled "labor list". The address bar displays the file path: "C:/Users/Chintan/Desktop/DJANGO_SQL/CRUDOperation/Labour/index.html". The main content area has a purple background. At the top left, it says "labor list Webpage". At the top right, there are three links: "work location", "company details", and "Contact". In the center-left, the text "No World without labors" is displayed above a cartoon illustration of three construction workers wearing hard hats and yellow overalls. Below this section, the text "Work Location Database." is centered, followed by the subtext "Diffrent locations for labours to work." A dark blue button labeled "location Database" is located below this text. In the bottom right corner of the purple area, there is another text block: "Get Information about company Insert new company or Delete comapny." Below this text is a dark blue button labeled "Company details Database".

Now When We click on location database we can see location table.

Pg admin location table

The screenshot shows the pgAdmin 4 interface. The left sidebar is titled 'Servers' and shows a tree structure for 'PostgreSQL 14'. Under 'Databases', there are three entries: '202001463_db', 'labor_wages_T18', and 'labor_wages_T18'. The 'labor_wages_T18' node is expanded, revealing sub-items like 'Casts', 'Catalogs', 'Event Triggers', 'Extensions', 'Foreign Data Wrappers', 'Languages', 'Publications', 'Schemas', and 'Tables'. The 'Tables' node is further expanded to show 'location'. The main pane title is 'labor_wages_T18/postgres@PostgreSQL 14*'. Below the title, there are tabs for 'Data output', 'Messages', and 'Notifications'. The data grid displays the 'location' table with the following columns: location_id, street_add, city, state, and country. The table contains 39 rows of data. At the bottom of the main pane, it says 'Total rows: 39 of 39' and 'Query complete 00:00:00.324'. On the right side of the interface, there is a vertical scroll bar.

location_id	street_add	city	state	country
25	Collins Hill, 1229312369	Cincinnati	Pennsylvania	Suriname
26	Ashley Grove, 1662866123	Atlanta	Arkansas	Vietnam

Pg admin company table

The screenshot shows the pgAdmin 4 interface. The left sidebar displays the database structure for 'PostgreSQL 14' under 'Servers'. The 'Databases' section shows three databases: '202001463_db', 'labor_wages_T18', and 'labor_wages_T18'. The 'labor_wages_T18' database is selected. The main pane shows the 'labor_wages_T18/postgres@PostgreSQL 14*' connection. A table named 'company' is displayed with the following columns: company_id [PK] integer, company_type character varying, street_add character varying, highest_no_worker integer, region_id integer, and company_name character varying. The table contains 90 rows of data. The status bar at the bottom indicates 'Total rows: 90 of 90' and 'Query complete 00:00:00.105'.

Now Add the New company detail

The screenshot shows a web browser window titled 'Company Database' with the URL '127.0.0.1:8000/Insertcom/'. The page displays an 'Insert New Company Details' form. The form consists of six input fields: 'Company ID :', 'Company Type :', 'Street Address :', 'Highest Number of Worker :', 'Region ID:', and 'Company Name :'. Below the form is an 'Insert' button. A success message 'company_name Cloudera Is saved successfully!!!' is displayed in a green box. At the bottom of the page is a 'Company database' button.

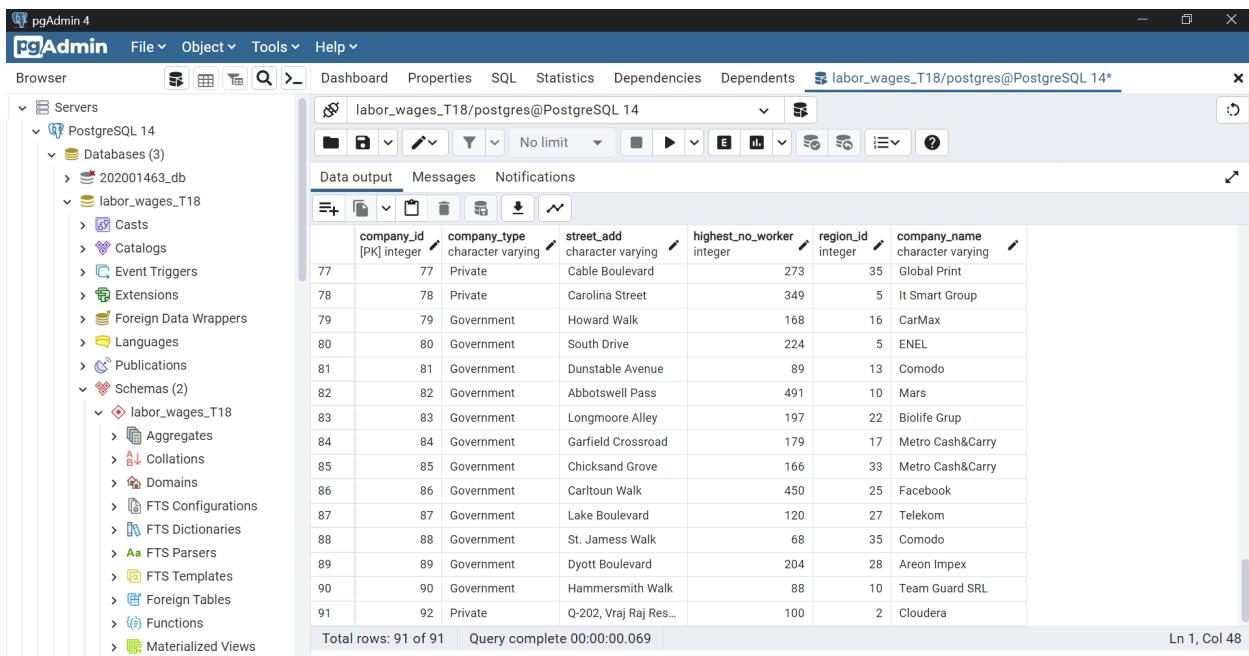

New table company after add new company details

A screenshot of a web browser window titled "Company Database". The URL is "127.0.0.1:8000/company/". The page displays a table of company data with the following columns: company_id, company_type, street_add, highest_no_worker, region_id, and company_name. The data is sorted by company_id. Each row includes "Edit" and "Delete" buttons. The table has 91 rows.

Company database

Pg admin table for highest number of worker is more than 400.

The screenshot shows the pgAdmin 4 interface. On the left, the browser pane displays various database objects like FTS Configurations, FTS Dictionaries, and Tables (15). The 'Tables (15)' section is expanded, and 'company_details' is selected. Under 'Columns (6)', all six columns are listed: company_id, company_type, street_add, highest_no_worker, region_id, and company_name. The main pane shows a table with 23 rows. The columns are: company_id [PK] integer, company_type character varying, street_add character varying, highest_no_worker integer, region_id integer, and company_name character varying. The 'highest_no_worker' column contains values such as 405, 487, 443, 475, 442, 490, 410, 427, 460, 470, 463, 462, 469, 491, and 450. The last row (company_id 23) has the highest value of 491. The status bar at the bottom right indicates 'Ln 1, Col 74'.
